## 1 Introduction

The Cumberland County Solid Waste Department (CCSWD) is reviewing the Long-term Operations Plan for the Ann Street Landfill (Project Site), located in Fayetteville, North Carolina. Estimates indicate that, at the frequency and volume of waste being disposed of in the secure landfill, it is likely that it will reach maximum capacity by 2030.

The alternatives include constructing horizontal landfill expansions on-site to increase disposal capacity for an additional 25 years and construction of a transfer station for interim diversion of solid waste to accommodate the landfill expansion or to serve as long-term mechanism for disposal of county waste should the landfill expansion not be viable. CCSWD is reviewing various long-haul options using truck hauling or rail transportation from the transfer station for the disposal of waste at other permitted landfill facilities. .In accordance with North Carolina Department of Environmental Quality (NCDEQ) policies and state statutes, CCSWD is conducting an environmental justice (EJ) review at the level of an EJ Report in its consideration of options for expanding more than 10 percent of the current permitted capacity or for the construction of a transfer station at the site.

EJ, as defined by the U.S. Environmental Protection Agency (EPA), is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies (https://www.epa.gov/environmentaljustice/learn-about-environmentaljustice). The purpose of this initial EJ Report is to preliminarily evaluate demographic and environmental conditions within the community in the vicinity of the Ann Street Landfill and the potential for impacts and/or benefits that the long-term disposal options would have on the community. This EJ Report will be used to develop a Public Participation Plan (PPP) to identify how input from agencies and the public will be solicited and considered with respect to community impact mitigation plans. The PPP will also present plans for strategic communications and outreach initiatives to effectively reach the public and maintain engagement throughout implementation of the landfill expansion or disposal alternatives evaluations.

This EJ Report is intended to meet the minimum NCDEQ Division of Waste Management Solid Waste Section requirements as stated in the document Guidance Specific to Solid Waste Management Permit Applicants for Identifying Underserved Communities and Determining Enhanced Public Engagement Methods, dated June 2021.

## 2 Geographic Area

The Project Site is located at 698 Ann Street in Fayetteville, in Cumberland County, North Carolina. Figure 1 shows the Project Site, a 1-mile radius from the landfill boundary (known as the 1-Mile Study Area), and the six United States Census Bureau (USCB) census tracts (CTs) that encompass these areas (known as the Demographic Study Area). The Demographic Study Area, which consists of CTs $2,8,12,14,26$, and 38 , was used to describe demographic characteristics of the area and to identify potential environmental impacts. Unless otherwise stated, EPA's Environmental Justice Screening and Mapping Tool (EJScreen) was used to synthesize information for the 1-Mile Study Area for each of the demographic characteristics.

Figure 1. Detailed site location map

## 3 Environmental Justice Evaluation

Socioeconomic indicators are crucial to EJ analysis because they identify characteristics that may result in disproportionately high and adverse human-health or environmental effects for certain communities, such as minorities and low-income populations. USCB data from 2019 show that approximately 18.8 percent of African American individuals, 15.7 percent of Hispanic individuals, and 7.3 percent of both Asian and White (non-Hispanic) individuals live below poverty. Minority communities often experience high poverty rates, less upward mobility, and more downward mobility as a result of common practices in the United States sometimes referred to as institutionalized racism (Massey 2004, located at https://www.brookings.edu/research/long-shadows-the-black-white-gap-in-multigenerationalpoverty/). Low income is associated with many disadvantages and can include less-desirable living situations, limited access to healthcare, and a plethora of environmental effects that may result in higher levels of disease and disability. These issues are compounded when EJ indicators overlap. Senior citizens, children, individuals with preexisting health conditions, and low-income individuals may be especially vulnerable if they belong to more than one marginalized group.

Effects from environmental pollutants prevalent in low-income and minority communities are often compounded by a multitude of existing environmental indicators. The Project Site is in a heavy industrial area bordered by railroad tracks and a wastewater treatment plant set along the Cape Fear River, while neighbored by many established communities. These characteristics suggest that Project Site activities could combine with other environmental effects and result in disproportionately high and adverse human-health or environmental effects.

This EJ Report presents the following information in an evaluation of effects and benefits due to the expansion and construction of a transfer station at the Project Site.

## Methodology

CCSWD considered socioeconomic indicators in the Demographic Study Area using information gathered on the USCB CTs (see Figure 1). USCB Explore Census Data (https://data.census.gov/cedsci/) was used to access USCB American Community Survey (ACS) 5-year estimates for 2015 through 2019 (2019 ACS) and current, available data from the USCB 2010 Decennial Census (2010 Census). CTs are small, relatively permanent statistical subdivisions of a county that represent a minimum population of 1,200 inhabitants and a maximum population of 8,000 inhabitants. Data were also compiled for a 1-mile radius surrounding the Project Site, known as the 1-Mile Study Area, from EPA's EJScreen (https://ejscreen.epa.gov/mapper/). County and statewide USCB data were used as a comparison to the CT and EJScreen data.

County health assessment data were compiled from the County Health Rankings and Roadmaps (www.countyhealthrankings.org), and sensitive receptors and local industrial sites were identified using the NCDEQ Community Mapping System

In this EJ Report, the following thresholds are derived from NCDEQ guidelines and are considered a notable EJ presence and/or exhibiting vulnerabilities that may increase the chance for disproportionately high and adverse human-health or environmental effects:

- Any USCB CT with a minority population of 50 percent or higher within the Demographic Study Area, where minority populations are defined as people who identify themselves as Asian or Pacific Islander, American Indian or Alaskan Native, Black (not of Hispanic origin), or Hispanic (i.e., all USCB race and ethnic categories apart from One Race White) (source: 2010 Census).
- Low-income populations, where per capita income is at or below $\$ 13,465$ or the poverty rate for all people exceeds the official 2020 poverty rate for the United States, 11.4 percent, as derived from the USCB Current Population Reports Series P-60 on Income and Poverty (source: 2019 ACS).
- Limited English proficiency (LEP) groups within the Demographic Study Area that constitute 5 percent or include 1,000 members of the population (whichever is less) of persons likely to be affected. Eligible LEP language groups are those whose members self-report speaking English less than very well (source: 2019 ACS).
- CTs that are 10 percent above the county or state average based on the following USCB 2019 ACS topics and associated tables:
- Race and Ethnicity (Table 9)
- Sex by Age (Table 12)
- Disability (Table S1810)
- Poverty (Table S1701)
- Language Spoken at Home (Table B16001)

For example, regarding poverty data, if a CT has 35 percent of the population classified as low income, and the county consists of 30 percent low income, then the CT would exceed the county average by 16.5 percent and thus be considered as having a notable EJ presence.

It is important to keep in mind that, based on the available data, the following limitations apply to this EJ Report:

- 2010 Census data were used in the EJScreen ACS Summary Reports. The ACS data were based on estimates in 2019 ( 5 -year estimates) from 2015 through 2019. The demographic information presented within this EJ Report may, therefore, be outdated.
- The frequency of updates to the NCDEQ Community Mapping System with respect to sensitive receptors, permitted facilities, and incident reports is unknown.

## 4 Proposed Project

This section describes the proposed project, including the existing Ann Street Landfill, proposed landfill expansion alternative, and the potential transfer station and long hauling.

### 4.1 Existing Landfill

The Ann Street Landfill has been in operation for more than 40 years. A map of the current Project Site and adjacent properties is provided in Figure 2. The site currently consists of approximately 355 acres and includes the following waste management facilities:

- A lined Subtitle D landfill with a leachate collection and removal system for disposal of MSW.
- A lined pond for temporary storage of leachate collected from the MSW landfill prior to release to the Fayetteville Public Works Commission's sanitary sewer system.
- A landfill gas management system that consists of a system of extraction wells and transmission pipes located within the MSW landfill that collect gas generated from decomposing waste. The collected gas is currently transmitted through a pipeline to a nearby industry where it serves a beneficial use as boiler fuel. Alternately, the gas can be burned at an on-site flare station.
- Borrow areas for the excavation of soil to cover waste within the landfills.
- An unlined and closed former MSW bale landfill (balefill),
- An unlined construction and demolition (C\&D) landfill.
- An inert debris disposal area for collection of brick, cement blocks, dirt, and rocks.
- A needle, syringe, and lancelet (otherwise known as sharps) collection area for residential waste.

Several buildings are located within the landfill property. These include a scale house, administration building, equipment maintenance building, contiguous recycling center and warehouse building, and the Cherokee Building, currently used for operational soil storage.

Figure 2. Project site
The existing Subtitle D (MSW) landfill is estimated to have less than 2 million cubic yards (MCY) of remaining permitted waste capacity, which is equivalent to approximately 8 years of site life at current disposal rates. The existing C\&D landfill is estimated to have 0.7 MCY of remaining permitted waste capacity, which is equivalent to approximately 8 years of site life at current disposal rates. Because of the amount of time required to evaluate waste disposal alternatives, as well as for permitting and construction of new disposal facilities, CCSWD must begin the landfill expansion evaluation and permitting process at this time to ensure uninterrupted waste disposal capacity for the city of Fayetteville and Cumberland County.

### 4.2 Proposed Landfill Expansion Alternatives

CCSWD is currently evaluating several options for expanding the Ann Street Landfill as follows:

- Western 55-acre landfill expansion
- Southern landfill expansion
- Transfer station

Figure 3 shows the conceptual locations of the potential landfill expansion alternatives and possible locations for the transfer station at the current site. Further descriptions of the expansion alternatives are provided in the following sections of this EJ Report. Detailed discussion of the potential environmental impacts and benefits associated with each alternative are provided in Sections 9 and 10 of this EJ Report, respectively.

Figure 3. Proposed landfill expansion alternatives and transfer station locations

### 4.2.1 Western 55-Acre Expansion with Transfer Station

Figure 4 conceptually illustrates the proposed western 55 -acre expansion and how it would tie into the existing landfill. The proposed western 55 -acre expansion would increase the existing MSW landfill westward into an unlined balefill within the existing landfill property. This baled trash method was used previously when the County operated a baling operation. Prior to extending the lined landfill into the balefill area, the existing waste (approximately 2.5 MCY ) would be mined to recover soil for use as daily cover during landfill operations and to potentially recover other disposed materials for recycling such as metals. Remaining waste would be deposited within the existing MSW landfill. This option would provide an additional net landfill capacity of approximately 5 MCY , after relocation of the existing waste is accounted for, which is equivalent to approximately 20 to 25 years of additional site life. This option would require construction of a transfer station at the Ann Street Landfill to divert waste while the balefill was being mined. The mining process could take as much as 10 years for a sufficient volume of waste to be mined to allow for the construction of a new landfill cell.

Figure 4. Proposed western 55-acre expansion

### 4.2.1 Southern Expansion

The proposed southern expansion option would extend the current landfill southward onto existing landfill property. The potential limits of a southern expansion are shown on Figure 5. This option is believed to be less practicable and economically feasible than the aforementioned western expansion options because the southeastern slope of the existing landfill has already received final cover as a closed landfill, and it would require relocation of a major sewer line to the Fayetteville Public Works Commission (PWC) Cross Creek Water Reclamation Facility. Construction of the southern expansion would require removal of the final cover system, removal and/or relocation of existing landfill infrastructure such as a lined leachate storage pond, a stormwater pond, a landfill gas flare station, and a large metal building formerly used for the baling operation. The removal and relocation of these facilities would incur considerable capital expense.

Figure 5. Proposed southern expansion

### 4.3 Potential Transfer Station with Long Hauling

CCSWD is currently evaluating options for locating a solid-waste transfer station on the Project Site if landfill expansion is not feasible or for interim hauling during balefill mining and phased construction of the western expansion. The transfer station could be used for managing MSW on site for off-site disposal. Local packer-type garbage trucks would continue to use the property but would deposit waste on an enclosed concrete tipping floor instead of within the landfill. The waste would then be pushed by front-end loaders from the tipping floor to hoppers where the waste would drop into transfer trailers parked in a tunnel beneath the hopper. The transfer trailers would bring the waste to an alternate landfill location, which could be a new landfill within Cumberland County or an out-of-county or out-of-state facility requiring long hauling. Long hauling waste transport could potentially be accomplishing through either trucking or by rail.

The existing recycling center (i.e., former baler building) or the Cherokee Building, as shown on Figure 2 above, could potentially be repurposed to house the transfer station, or an entirely new transfer station could be constructed on landfill property.

CCWSD will be issuing a Request for Proposals (RFP) to solicit proposals from solid waste haulers and private landfills that could be potential long-haul trucking destinations for waste generated within the county.

## 5 Regional and Local Settings

Following the methodology described in Section 2 of this EJ Report, this section is based on USCB 2010 Census and 2019 ACS data and EJScreen, given first at the state and county level (i.e., the regional setting) and then at the CT level (i.e., the local setting). Demographics of Cumberland County are compared to the local setting to identify disparities surrounding the Demographic Study Area. EJScreen ACS Summary Reports for the 1-Mile Study Area and USCB data for North Carolina, Cumberland County, and the six CTs (the Demographic Study Area) are provided in Appendix A.

Fort Bragg, a U.S. Army installation, and Pope Air Force Base, now operated by the U.S. Army as part of Fort Bragg, are within Cumberland County. According to USCB, more than a third (approximately 1.5 million) individuals who have served in the U.S. armed forces since September 2001 and are veterans, have a service-connected disability. This may explain the higher percentage of persons with disabilities in the regional and local settings as compared to state percentages.

### 5.1 Race and Ethnicity

These sections present the races and ethnicities with which the population self-identifies at both the regional and local levels.

### 5.1.1 Regional Setting

According to the 2010 Census, Table P9, Hispanic or Latino, and Not Hispanic or Latino by Race, as summarized in Table 1, North Carolina's population totaled 9,535,483 individuals, and Cumberland County had a total estimated population of 319,431 individuals. The three most common racial groups across the state and county were White, Black or African American, and Hispanic or Latino of any race.

Cumberland County, as compared to the state, has a higher minority population, with 52.8 percent of the population belonging to a minority group in the county as compared to 34.7 percent in North Carolina. In addition, a higher percentage of the population of the county selfidentified as Black or African American (35.7 percent) and a lower percentage of those selfidentified as White ( 47.2 percent) than in the state as a whole.

Table 1. Regional Setting: Race and Ethnicity

| Race and Ethnicity | North Carolina |  | Cumberland County |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Number | Percentage | Number | Percentage |
| Total population | $9,535,483$ | 100 | 319,431 | 100 |
| White | $6,223,995$ | 65.3 | 150,749 | 47.2 |
| Black or African American | $2,019,854$ | 21.2 | 113,939 | 35.7 |
| American Indian or Alaska Native | 108,829 | 1.1 | 4,655 | 1.5 |
| Asian | 206,579 | 2.2 | 6,885 | 2.2 |
| Native Hawaiian or Other Pacific Islander | 5,259 | 0.1 | 1,114 | 0.3 |
| Some Other Race | 15,088 | 0.2 | 671 | 0.2 |
| Two or More Races | 155,759 | 1.6 | 11,228 | 3.5 |
| Hispanic or Latino (of any race) | 800,120 | 8.4 | 30,190 | 9.5 |

From 2010 Census, Table P9, Hispanic or Latino, and Not Hispanic or Latino by Race.

### 5.1.2 Local Setting

The 2010 Census, Table P9, Hispanic or Latino, and Not Hispanic or Latino by Race, as summarized in Table 2, indicates that, across all six CTs, the White population ranged from 15 to 69 percent, the Black or African American population ranged from 23 to 76 percent, and the Hispanic or Latino population ranged from 2.2 to 5.4 percent. According to USCB data, for the Demographic Study Area, Black or African American was the population constituting the largest percentage, with a total of 2,942 individuals comprising 76 percent of the total population. This percentage exceeded both the state and county proportions of 21 and 35 percent, respectively, by more than 10 percent. The next largest population by ethnicity was White ( 17 percent).

Minority populations constituted more than 84 percent of the total population in CT 38, the largest minority percentage in the Demographic Study Area. These populations generally occupy residences along the CSX railroad tracks from the Project Site to the Harnett County line. The proportion of the Black or African American population within all CTs exceeded both the state and county proportions of 21 and 35 percent, respectively, by more than 10 percent. Similarly, the proportion of American Indian or Alaska Native population within CTs 2, 14, and 38 exceeded both the state and county proportions by more than 10 percent. Individuals who
identified as Two or More Races constituted a higher percentage than the state as a whole by more than 10 percent in all CTs except CT 26. Based on this analysis, all six CTs are considered to have EJ populations; these populations are given in bold and highlighted in yellow in Table 2.

Several indicators present within the Demographic Study Area exemplify minority population characteristics outside of CT data. One example of these characteristics is the five African Methodist Episcopal (AME) churches in close proximity to the Project Site. These churches are present both within the CTs that show high minority population percentages and also in CTs that demonstrate primarily White populations. These churches include St. Luke AME Church (labeled 10 on Figure 6) and Evans Metropolitan AME Church (labeled 19 on Figure 6) within the 1-Mile Study Area. Mattock Memorial AME Zion Church, St. John's AME Church, and Hood Memorial AME Zion Church are all outside of the 1-Mile Study Area but within the Demographic Study Area. Other African American EJ indicators include Eki African Market, Morning Star African and Caribbean Market, and several hair salons that advertise a specialty in African American hair types. Each of these resources indicates not only the presence of African Americans in Fayetteville but also suggests strong community ties in the area. The Mattock Memorial AME Church website, for example, advertises itself as both a place of worship and a place of community support. The church recently hosted a food, clothing, and supply giveaway.

Several Hispanic resources are also present in the area, including a grocery store called Tienda y carniceria la tapatita. Manna Church on Ramsey Street has services in Spanish and is likely associated with the Manna Dream Center Shelter. Several churches in or near Fayetteville have Spanish names, including Iglesia Ni Christo and Iglesia Ciudad de Restauracion; however, it is not clear whether masses are also held in Spanish at these locations. A language school, Spanish Emersion, is outside the Demographic Study Area but is relevant to the overall character of minorities in the area. A nonprofit organization, Latinos United for Progress, is also outside of, but in close proximity to, the Demographic Study Area.

Table 2. Local Setting: Race and Ethnicity

| Race and Ethnicity | 1-Mile Study Area: For Informational Purposes |  | CT 2 |  | CT 8 |  | CT 12 |  | CT 14 |  | CT 26 |  | CT 38 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | No. | \% | No. | \% | No. | \% | No. | \% | No. | \% | No. | \% | No. | \% |
| Total population | 3,492 | 100 | 1,633 | 100 | 2,654 | 100 | 5,617 | 100 | 6,146 | 100 | 4,218 | 100 | 2,977 | 100 |
| Total minority | 3,038 | 87.0 | 1,346 | 82.5 | 964 | 36.3 | 4,446 | 79.2 | 3,364 | 54.7 | 1277 | 30.3 | 2,523 | 84.7 |
| White | 454 | 13.0 | 287 | 17.5 | 1,690 | 63.7 | 1,171 | 20.8 | 2,782 | 45.3 | 2,941 | 69.7 | 454 | 15.3 |
| Black or African American | 2,717 | 78.0 | 1,180 | 72.3 | 732 | 27.6 | 3,902 | 69.5 | 2,502 | 40.7 | 1,007 | 23.9 | 2,284 | 76.7 |
| American Indian or Alaska Native | 69 | 2.0 | 52 | 3.2 | 10 | 0.4 | 30 | 0.5 | 325 | 5.3 | 43 | 1 | 52 | 1.7 |
| Asian | 21 | 1.0 | 38 | 2.3 | 29 | 1.1 | 45 | 0.8 | 62 | 1 | 27 | 0.6 | 7 | 0.2 |
| Native Hawaiian or Other Pacific Islander | 0 | 0.0 | 3 | 0.2 | 1 | 0 | 3 | 0.1 | 10 | 0.2 | 4 | 0.1 | 0 | - |
| Some Other Race | 0 | 0.0 | 0 | - | 4 | 0.2 | 16 | 0.2 | 6 | 0.1 | 3 | 0.1 | 4 | 0.1 |
| Two or More Races | 83 | 2.0 | 37 | 2.3 | 63 | 2.4 | 146 | 2.5 | 182 | 3 | 58 | 1.4 | 83 | 2.8 |
| Hispanic or Latino (of any race) | 147 | 4.0 | 36 | 2.2 | 125 | 4.7 | 304 | 5.4 | 277 | 4.5 | 135 | 3.2 | 93 | 3.1 |

From 2019 ACS Summary Report and 2010 Census, Table P9, Hispanic or Latino, and Not Hispanic or Latino by Race.
All bolded and yellow highlighted cells indicate a minority population that is greater than or equal to $10 \%$ higher when compared to state and county minority populations.

### 5.2 Age and Sex

This section presents demographic information related to age and sex at both the regional and local levels.

### 5.2.1 Regional Setting

The 2010 Census, Tables P12 and P13, Sex by Age and Median Age by Sex, respectively, as summarized in Table 3, show that North Carolina's population totaled 9,535,483 individuals with a median age of 37 years, and Cumberland County had a total estimated population of 319,431 individuals with a median age of 31 years. The data indicate that the county population generally trends younger than the state population as a whole. The median age for the state ( 37 years) is over 10 percent of the median age of Cumberland County residents (31 years), with the median age of females being slightly higher than the median age for males in both the county and the state.

The percentages of males and females within Cumberland County is relatively close to the state percentages, with both the state and the county having a slightly larger proportion of females than males in the population as indicated in Table 3.

Table 3. Regional Setting: Age and Sex

| Age | North Carolina |  |  |  |  |  | Cumberland County |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number |  |  | Percentage |  |  | Number |  |  | Percentage |  |  |
|  | $\begin{gathered} \text { Both } \\ \text { sexes } \end{gathered}$ | Male | Female | Both sexes | Male | Female | $\begin{aligned} & \hline \text { Both } \\ & \text { sexes } \end{aligned}$ | Male | Female | Both sexes | Male | Female |
| Total population | 9,535,483 | 4,645,492 | 4,889,991 | 100\% | 48.7 | 51.3 | 319,431 | 154,328 | 165,103 | 100\% | 48.3 | 51.7 |
| Median age | 37.4 | 36.0 | 38.7 |  |  |  | 31.0 | 29.3 | 32.9 |  |  |  |

From 2010 Census, Tables P12 and P13, Sex by Age and Median Age by Sex, respectively.

### 5.2.2 Local Setting

2010 Census Tables P12 and P13 indicate, as summarized in Table 5 through Table 7, that the population within the CTs generally trends older than the state and county population. The percentage of males and females within CTs 2,12 , and 38 is significantly different from that of the state or county and represents a change of 10 percent or greater. Table 8 summarizes the available age and sex data obtained through EJScreen for the 1-Mile Study Area.

Table 4. Local Setting: Age and Sex—CTs 2 and 8

| Age | CT 2 |  |  |  |  |  | CT 8 |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

From EJScreen.

### 5.3 Disability

This section presents demographic information related to disability at both the regional and local levels.

### 5.3.1 Regional Setting

The Census Table S1810, Disability Characteristics 2019 ACS, estimates as summarized in Table 9 and Table 10, show that North Carolina's civilian noninstitutionalized population totaled $10,060,249$ individuals. There are $1,352,783$ persons ( 13 percent) who self-identify as a person with a disability in North Carolina.

Cumberland County had a total estimated civilian noninstitutionalized population of 301,989 individuals. There are 52,851 persons, or 17 percent of this population, who self-identify as a person with a disability in the county, which is a higher proportion than the state's disabled population. Cumberland County trends higher than the state as a whole in all four types of disabilities identified in this analysis (cognitive, hearing, visual, and ambulatory).

Table 8. Regional Setting: Disability—North Carolina

From 2019 ACS, Table S1810.

### 5.3.2 Local Setting

The 2019 ACS estimates, as summarized in Table 11 through Table 16, show that all CTs have a 10 percent or greater difference for individuals with a disability than percentages for the state or county, with CT 2 having the greatest percentage of disabled individuals at 26 percent. Ambulatory and cognitive difficulties comprise the largest percentages of the disabled population in the CTs. As stated above, two U.S. military installations are in Cumberland County, which may contribute to a higher percentage of persons identifying as having a disability. Comparable data were not available through EJScreen for the 1-Mile Study Area.

### 5.4 Poverty

This section presents demographic information related to poverty at both the regional and local levels.

### 5.4.1 Regional Setting

The 2019 ACS estimates, as summarized in Table 17 and Table 18, show that North Carolina's population for whom poverty status is determined totaled $9,984,891$ individuals, and Cumberland County had a population for whom poverty status is determined of 316,519 individuals. There are 1,467,591 persons (14 percent) who are considered below the poverty level in North Carolina, which is proportionately lower than the county's 58,132 persons ( 18 percent) who are considered below the poverty level (Table 18). The poverty levels by race are similar between state and county, with the county having slightly higher proportions of individuals in poverty in all races than the state as a whole.

Table 16. Regional Setting: Poverty-North Carolina

From 2019 ACS, Table S1701, Poverty Status in the Past 12 Months.

### 5.4.2 Local Setting

The 2019 ACS estimates, as summarized in Table 19 through Table 24, show that all CTs in the project area except for CT 26 have a 10 percent or greater difference from the state or county's percentages for persons considered below the poverty level. Based on the poverty rate, CTs 2 (54.6), 8 (20.1), 12 (43.6), 14 (29.2), and 38 (36.8) are considered to have a notable EJ presence. This is especially true for CT 2, where the majority of the total population is below the poverty level, and the majority of all racial groups considered are below the poverty level except for the Asian group (0 percent). Poverty data are not available from EJScreen for the 1-Mile Study Area.

Although the total population below the poverty level in CT 26 is not substantially higher than the state or county, the poverty level for "Some other Race" was 100 percent and considered to be substantially higher than the poverty levels for "Some other Race" in the county and state populations.

Table 18. Local Setting: Poverty-CT 2

### 5.5 Household Income

This section presents demographic information related to household income at both the regional and local levels.

### 5.5.1 Regional Setting

The 2019 ACS data, as summarized in Table 25, show that there are 3,965,482 households in North Carolina and 125,427 households in Cumberland County. In both the county and the state, the greatest percentage of households (18.0 and 18.7 percent, respectively) were in the $\$ 50,000$ to $\$ 74,999$ category, and the next-greatest percentage of households (15.6 and 13.9 percent, respectively) were in the $\$ 35,000$ to $\$ 49,999$ category. Despite having a similar household income breakdown, the median income in Cumberland County is approximately $\$ 7,700$ below the state median, and the total percentage of households with an income of below $\$ 50,000$ was greater in the county ( 53.1 percent) than in the state (45.9).

Table 24. Regional Setting: Household Income

|  | North Carolina Households |  | Cumberland County Households |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Estimate | Margin of Error $+/-$ | Estimate | Margin of Error $+/-$ |
| Total | $3,965,482$ | $\pm 10,327$ | 125,427 | $\pm 954$ |

From 2019 ACS, Table S1901, Income in the Past 12 Months (In 2020 Inflation-Adjusted Dollars)

### 5.5.2 Local Setting

The 2019 ACS estimates, as summarized in Table 26, show that more than 50 percent of each CT has household income percentages under $\$ 50,000$. The median incomes for CTs 8 and 26 are higher than the state and county incomes. A 10 percent decrease in the median income for the state is $\$ 49,141$, and for Cumberland County is $\$ 42,187$. The CTs that have median incomes 10 percent below the state or county include CTs 2, 12, 14, and 38, and all the CTs have 10 percent or more households in categories below $\$ 50,000$ as compared to the county and state. Data from Table 26 show poverty rates within the Demographic Study Area, compared to EJScreen data for the 1-Mile Study Area shown in Table 27.

Table 25. Local Setting: Household Income

| $\$ 75,000+$ | 132 | $9 \%$ | 98 |

From EJScreen.

### 5.6 Per Capita Income and Employment Rate

Per capita income is a useful measure of economic wellbeing. Per capita income includes income from 401(k) plans as well as other non-labor income sources like transfer payments, dividends, and rent. Because per capita income is average income per person, it is important to consider that there is a proportion of people in the analysis area who are not employed and therefore lower the average income.

### 5.6.1 Regional Setting

The 2019 ACS estimates, as summarized in Table 28, show that the North Carolina per capita income (total personal income divided by total population in the area) was $\$ 30,783$, and the Cumberland County per capita income was $\$ 24,936$. This is approximately 19 percent less than the state per capita income.

North Carolina's employed population age 16 years and above in the labor force was 62 percent. In Cumberland County the employed population was 64 percent, which is slightly higher than the state as a whole. The County's large military presence is assumed to be a contributing factor to the higher employment rate.

Table 27. Regional Setting: Per Capita Income and Employment Rate

| Per Capita Income | North Carolina | Cumberland County |
| :--- | :---: | :---: |
| Total population | $10,264,876$ | 332,861 |
| Number of households | $3,965,482$ | 125,427 |
| Number of households with wages or salary | $2,926,093$ | 95,001 |
| Mean per capita income (\$) | 30,783 | 24,936 |
| Employment rate | $62.4 \%$ | $64.8 \%$ |

From USCB, 2019 ACS Table S1902 Mean Income in the Past 12 Months (in 2019 Inflation-Adjusted Dollars) 5 year Estimates (2015-2019).

### 5.6.2 Local Setting

The per capita income ranges from $\$ 13,812$ (CT 36) to $\$ 35,571$ (CT 8). Per capita income in CT 8 is higher than the state per capital income by more than 10 percent. The large military presence in Cumberland County may result in higher per capita income. Census data for Table DP03, Selected Economic Characteristics, indicate that 1.1 percent of the North Carolina population is employed in the armed forces compared to 11.2 percent in Cumberland County.

The remaining CTs have per capita incomes 10 percent or lower than the county average. Table 29 shows per capita income and employment rate. EJScreen data for the 1-Mile Study Area are shown in Table 30.

Table 28. Local Setting: Per Capita Income and Employment Rate

| Per Capita Income | CT 2 | CT 8 | CT 12 | CT 14 | CT 26 | CT 38 |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Total population | 2,202 | 2,684 | 5,156 | 6,257 | 5,241 | 2,754 |
| Number of households | 992 | 1,326 | 2,344 | 2,438 | 1,938 | 863 |
| Number of households with <br> wages or salary | 478 | 1,001 | 1,470 | 1,672 | 1,291 | 520 |
| Mean per capita income $(\$)$ | $\mathbf{1 6 , 6 4 4}$ | 35,571 | $\mathbf{1 6 , 6 4 8}$ | $\mathbf{1 7 , 7 8 8}$ | $\mathbf{2 4 , 5 4 3}$ | $\mathbf{1 3 , 8 1 2}$ |

From 2019 ACS Table S1902, Mean Income in the Past 12 Months (in 2019 Inflation-Adjusted Dollars).
All bolded and yellow highlighted cells indicate a proportion of the population with a mean per capita income that is to $10 \%$ or more lower than state or county populations, or an employment rate that is that is $10 \%$ or more lower than state or county populations.

Table 29. Local Setting: Employed Population-1-Mile Study Area

| In labor force | 1,269 | $47 \%$ | 180 |
| Civilian unemployed in labor force | 236 | $9 \%$ | 71 |
| Not In labor force | 1,414 | $53 \%$ | 253 |

From EJScreen.

### 5.7 Limited English Proficiency

This section presents demographic information related to LEP at both the regional and local levels.

### 5.7.1 Regional Setting

The Safe Harbor Guidelines state that should an LEP group be identified during the permit application process, written translations of vital documents for each eligible LEP language group that constitutes 5 percent or includes 1,000 members (whichever is less) of the population of persons eligible to be served or likely to be affected or encountered. If there are fewer than 50 persons in a language group that reaches the 5 percent trigger, then NCDEQ will not translate vital written materials, but instead will provide written notice in the primary language of the LEP language group of the right to receive competent oral interpretation of those written materials free of cost. The safe harbor provisions apply to the translation of written documents only. Safe harbor guidelines are per the EPA guidance for LEP persons and implemented by NCDEQ when deemed appropriate.

Seven potential LEP language groups were identified during this initial screening of demographic data: Spanish or Spanish Creole, French, Hindi, Vietnamese, Other Asian languages, Other Pacific Island languages, and Arabic. However, none of the language groups
identified reached the 5 percent threshold. No larger LEP groups were identified during the site visit and no specific translation requests were received.

The 2019 ACS estimates, as summarized in Table 31, show that there are 9,668,148 individuals aged 5 or more years in North Carolina. Of these individuals, 88 percent speak English only while 12 percent are classified as living in a "Non-English Home." For those living in a "NonEnglish Home," 7 percent speak English "very well," 2 percent speak English "well," 2 percent speak English "not well," and 1 percent speak English "not at all."

Cumberland County had an estimated 307,616 individuals aged 5 or more years. Of these individuals, 88 percent speak only English while 12 percent are classified as living in a "NonEnglish Home." For those living in a "Non-English Home," 8 percent speak English "very well," 2 percent speak English "well," 1 percent speak English "not well," and 0 percent speak English "not at all." The data indicate that Cumberland County trends closely with state percentages for LEP.

Table 30. Regional Setting: Limited English Proficiency

|  | North Carolina |  |  | Cumberland County |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | Number | Percentage | Margin of <br> Error $+/-$ | Number | Percentage | Margin of <br> Error $+/-$ |

From 2019 ACS.

### 5.7.2 Local Setting

Overall, the data indicate that LEP rates within the CTs are lower than the state and county rates. The 2019 ACS data (shown in Table 32 through Table 34) indicate that no LEP language groups meet the 5 percent or 1,000-member Safe Harbor Guidelines threshold requiring written translations of vital documents; however, it is worth noting that CTs 2 and 14 have populations that are 10 percent or lower than the LEP of the state or county. EJScreen data for the 1-Mile Study Area are shown in Table 35.

Table 31. Local Setting: Limited English Proficiency—CTs 2 and 8

|  | CT 2 |  |  | CT 8 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | Number | Percentage | MOE ( $\pm)$ | Number | Percentage | MOE ( $\pm$ ) |
| Total (population 5 years and over) | 1,932 | 100 | 215 | 2,575 | 100 | 216 |
| Speak only English | 1,816 | 94 | 219 | 2,409 | 94 | 210 |
| Non-English at Home | 116 | 6 | 61 | 166 | 6 | 67 |

From EJScreen.
All bolded and yellow highlighted cells indicate a that there is a population in a non-English-speaking home or that speaks English "not well," "not at all," "less than well," or "less than very well" that is that is greater than or equal to $10 \%$ higher than state or county populations.

### 5.8 Educational Attainment Levels

USCB gathers educational data through the ACS. Educational attainment refers to the highest level of education that an individual has completed.

### 5.8.1 Regional Setting

The 2019 ACS estimates, as summarized in Table 36, show that there are 6,983,859 individuals over 25 years of age in North Carolina with $3,974,385$ individuals, or 56.9 percent, achieving a high school diploma or higher. Cumberland County has 205,908 individuals over 25 years old with 105,922 individuals, or 51.4 percent, achieving a high school diploma or higher. Proportionally, fewer individuals in the county attained an education of less than 9th grade than the state as a whole ( 2.8 percent versus 4.5 percent, respectively), and fewer individuals in the county did not receive a diploma than the state as a whole ( 6.3 percent versus 7.7 percent, respectively). The proportion of high school graduates is similar; however, fewer county
residents earned a bachelor's degree or higher than did state residents ( 25.5 percent versus 31.3 percent proportionally). Significantly more state residents completed a bachelor's degree or higher than graduated high school only; however, approximately the same number of county residents completed a bachelor's degree or higher as those that only graduated high school.

Table 35. Regional Setting: Educational Attainment Levels

| Educational Attainment Levels | North Carolina |  |  |  | Cumberland County |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number |  | Percentage |  | Number |  | Percentage |  |
|  | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- |
| Total above 25 | 6,983,859 | $\pm 1,636$ | (X) | (X) | 205,908 | $\pm 97$ | (X) | (X) |
| Less than 9th grade | 314,545 | $\pm 4,322$ | 4.5\% | $\pm 0.1$ | 5,669 | $\pm 507$ | 2.8\% | $\pm 0.2$ |
| 9th-12th grade, no diploma | 538,851 | $\pm 6,801$ | 7.7\% | $\pm 0.1$ | 12,937 | $\pm 692$ | 6.3\% | $\pm 0.3$ |
| High school graduate (includes equivalency) | 1,791,532 | $\pm 12,844$ | 25.7\% | $\pm 0.2$ | 53,420 | $\pm 1,359$ | 25.9\% | $\pm 0.7$ |
| Bachelor's degree or higher | 2,182,853 | $\pm 16,331$ | 31.3\% | $\pm 0.2$ | 52,502 | $\pm 1,457$ | 25.5\% | $\pm 0.7$ |

From 2019 ACS, Table S1501, Educational Attainment.

### 5.8.2 Local Setting

The 2019 ACS estimates, as summarized in Table 37 through Table 39, show that a total of 16,175 individuals are in the six CTs, with 8,110 individuals or 50 percent who have attained a high school diploma or higher. The two CTs with the highest level of educational attainment (bachelor's degree or higher) are CT 8, with 43.9 percent, and CT 26, with 20.8 percent. For CT 8 , this percentage is 40 percent higher than the state percentage and 72 percent higher than across the county. CT 26 has a 33.5 percent decrease from the state's 31.3 percent bachelor's degree or higher rate and a decrease of 25.5 percent over the county. CTs $2,12,14$, and 48 had significantly higher proportions of the population that did not graduate high school than the county or state. EJScreen data for the 1-Mile Study Area are shown in Table 40.

Table 36. Local Setting: Educational Attainment Levels-CTs 2 and 8

| Educational Attainment Levels | CT 2 |  |  |  | CT 8 |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Number |  | Percentage |  | Number |  | Percentage |  |
|  | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- | Estimate | Margin of Error +/- |
| Total above 25 | 1,344 | $\pm 134$ | (X) | (X) | 2,014 | $\pm 159$ | (X) | (X) |
| Less than 9th grade | 177 | $\pm 91$ | 13.2\% | $\pm 6.5$ | 43 | $\pm 27$ | 2.1\% | $\pm 1.3$ |
| 9th-12th grade, no diploma | 200 | $\pm 69$ | 14.9\% | $\pm 5.1$ | 115 | $\pm 53$ | 5.7\% | $\pm 2.5$ |
| High school graduate (includes equivalency) | 422 | $\pm 90$ | 31.4\% | $\pm 6.0$ | 369 | $\pm 87$ | 18.3\% | $\pm 4.0$ |
| Bachelor's degree or higher | 136 | $\pm 69$ | 10.1\% | $\pm 4.8$ | 884 | $\pm 127$ | 43.9\% | $\pm 5.6$ |

From 2019 ACS, S1501, Educational Attainment.
All bolded and yellow highlighted cells indicate a proportion of the population that is greater than or equal to $10 \%$ higher than state or county populations has an educational attainment of High School Graduate or lower.

Table 37. Local Setting: Educational Attainment Levels-CTs 12 and 14

| Educational <br> Attainment Levels | CT 12 |  |  |  | CT 14 |  |  |  |

| Bachelor's degree or more | 207 | $9 \%$ | 109 |

From EJScreen.
All bolded and yellow highlighted cells indicate a proportion of the population that is greater than or equal to $10 \%$ higher than state or county populations has an educational attainment of High School Graduate or lower.

## 6 County Distress Ranking

The North Carolina Department of Commerce annually ranks the state's 100 counties based on economic wellbeing and assigns each a "tier" designation. This tier system is incorporated into various state programs to encourage economic activity in the less prosperous areas of the state. The 40 most distressed counties are designated as Tier 1, the next 40 as Tier 2, and the 20 least distressed as Tier 3. Based on the 2021 county Tier designations, Cumberland County is in Tier 1, meaning it is among the most economically distressed counties in North Carolina.

## 7 State Designated Tribal Statistical Areas

According to the 2020 North Carolina Tribal and Urban Communities map produced by the North Carolina Commission of Indian Affairs, Cumberland County is not a designated location of a state or federally recognized tribe. The map does indicate that Cumberland County is the location of an urban First Nations organization known as the Cumberland County Association for Indian People, which holds a membership on the North Carolina Commission of Indian Affairs. The Lumbee Tribe of North Carolina is located approximately 13 miles south of Fayetteville.

2019 ACS race and ethnicity data provided above in Table 2 indicate the potential presence of persons identifying as American Indian within the 1-Mile Study Area. Although the U.S. Census category includes both American Indian and Alaska Native, the location of the Project Site would suggest a predominance of American Indian rather than Alaska Native. Based on the 2019 ACS, 2.0 percent of persons within the 1-Mile Study Area identified as one of these two ethnicities. Comparatively, Census Bureau data from 2020 show that approximately 1.6 percent of persons in Cumberland County are American Indian or Alaska Native and 1.2 percent of persons in North Carolina are American Indian or Alaska Native.

## 8 County and Demographic Study Area Health

The University of Wisconsin Population Health Institute, in collaboration with the Robert Wood Johnson Foundation, calculated a county health rankings system for all counties in the United States (www.countyhealthrankings.org). This ranking system is based on health outcomes, such as lifespan and self-reported health status, and health factors, such as environmental, social, and economic conditions. According to the 2021 rankings, out of all 100 counties in North Carolina (with 1st place indicating the healthiest), Cumberland County ranks 56th in health factors and 55th in health outcomes.

According to the NCDEQ Community Mapping System Environmental Justice Tool, death rates (per 100,000 deaths) for cancer, heart disease, cardiovascular disease, and diabetes were higher than North Carolina as a whole, as summarized in Table 41.

## Table 40. Health Outcomes

| Cause of Death | North Carolina | Cumberland County |
| :--- | :--- | :--- |
| Cancer | 169.1 | 181.3 |
| Heart disease | 163.7 | 193.5 |
| Stroke | 43.1 | 41.5 |
| Cardiovascular disease | 221.9 | 253.7 |
| Diabetes | 22.8 | 29.2 |

From NCDEQ 2021 EJ Tool.
Based on a search of EJScreen EJ indicators, nearly the entire Demographic Study Area is likely to experience health disparities. Data representing CTs $2,12,14$, and 38 are within the 95th-100th percentile of low life expectancy and CT 28 is within the 88th percentile. Life expectancy data are not available for CT 8. The prevalence of asthma among adults 18 years of age and older is within the 95th-100th percentile in CTs 2,12 , and 38 . It is within the 91 st percentile within CT 14 and within the 51 st percentile for CTs 8 and 28 .

## 9 Local Sensitive Receptors

EPA suggests that sensitive receptors include hospitals, schools, daycare facilities, elderly housing, and convalescent facilities. These are areas where the occupants are more susceptible to the adverse effects of exposure to toxic chemicals, pesticides, and other pollutants. Extra care must be taken when dealing with contaminants and pollutants near areas recognized as sensitive receptors. For instance, children and the elderly may have a higher risk of developing asthma from elevated levels of certain air pollutants than a healthy individual aged between 18 and 64 years.

Data from the NCDEQ Community Mapping System shows the following potential sensitive receptors within the 1-Mile Study Area. Additional sensitive receptors may be identified during the permit application process, such as during the field reconnaissance visit or through public comment. Locations of churches, schools, and nursing homes within the 1-Mile Study Area are shown on Figure 6 and listed in Table 42.

Figure 6. Sensitive receptors within 1-Mile Study Area; numbered features are identified in Table 42

Table 41. List of Sensitive Receptors within EJ Study Area

| Receptor Number | Receptor Name | Activity Description | Address |
| :---: | :---: | :---: | :---: |
| 1 | Holy Hill of Zion Ministries | Place of worship | 1330 Taylor Drive |
| 2 | New Life Covenant Fellowship | Place of worship | 362 Neville Street |
| 3 | Secure Holy Church of Christ | Place of worship | 311 Neville Street |
| 4 | Live by Faith Ministries | Place of worship | 412 Neville Street |
| 5 | Charity Church | Place of worship | 431 Neville Street |
| 6 | Charity Church | Place of worship | 431 Neville Street |
| 7 | John Wesley United Methodist Church | Place of worship | 616 Cumberland Street |

|  | Heritage Place Senior Living | Residential | 325 N Cool Spring Street |

## 10 Local Permitted Sites and Incidents

The NCDEQ Community Mapping System Environmental Justice Tool was used to identify facility permit sites and the locations of storage tank incident reports (as of June 10, 2021) within the 1-Mile Study Area. The 120 facility permits, underground storage tank (UST) and aboveground storage tank incident reports, and active regulated facilities are listed by category below and in Appendix C. Figure 7 shows permitted facility locations. Figure 8 shows UST locations.

- 3 air quality permit sites
- 2 National Pollutant Discharge Elimination System (NPDES) wastewater treatment facility permits
- 4 permitted solid-waste landfills (open and closed)
- 4 inactive hazardous sites
- 2 pre-regulatory landfill sites
- 1 remediated EPA-designated Superfund site
- 4 brownfields program sites
- 2 hazardous waste sites
- 68 underground storage tank incidents
- 13 above ground storage tank incidents
- 18 underground storage tank active facilities

Note that there may be multiple permits associated with one facility and incidents vary in size, significance, and time frame. Many of the reported incidents are identified as resolved, and the incident reports are closed.

The former site of the Carolina Transformer Company, which operated between 1967 and 1982, was designated a Superfund site in 1987 because of contaminated debris, sediment, soil, and groundwater resulting from facility operations. EPA concluded that the site is not a current environmental risk to nearby residents and workers.

Figure 7. Permitted facilities within 1-mile radius of landfill

Figure 8. Underground storage tank locations within the 1-Mile Study Area

## 11 Impact Assessment

The proposed alternatives being considered as part of the Long-term Operations Plan for the Project Site expansion and transfer station construction will provide a substantial benefit to Cumberland County residents. The alternatives provide CCSWD with the ability to plan for and implement cost-effective and environmentally protective solid-waste management strategies. While continued operation of the Project Site for disposal is a good use of available resources, the operations will continue to have an impact on the surrounding EJ community. These impacts have successfully been mitigated by County operations through the development and operations of the highly regulated secure solid-waste landfill and the permitted construction and demolition debris landfill.

In this section, the benefits of the proposed alternatives are summarized, along with the potential adverse effects on the EJ community and mitigation strategies that can be employed to address the impacts. The proposed alternatives growth-inducing and cumulative effects are also discussed.

### 11.1 Potential Benefits

The proposed landfill expansion alternatives can provide significant environmental, transportation, and economic benefits to the residents of Cumberland County. The construction and long term operation of a transfer station at the site, would also provide some benefits to the community, but would increase traffic from the site and shifts the burden for the environmentally sound disposal onto another community, that may also be located in an EJ community.

### 11.1.1 Environmental Benefits

The following are environmental benefits of the proposed landfill expansion:

- Expansion of the landfill and construction and interim operation of a transfer station at the Project Site will allow Cumberland County to remain a provider of waste disposal for county residents and businesses and the County will be responsible and accountable for maintaining compliance with state and local environmental regulations and performance standards. If the County were not permitted to expand the disposal capacity at the existing facility, it would require siting, permitting, and construction of a new disposal facility within the county or relying on another community for the responsible disposal of the County's waste.
- Landfill expansion and construction and interim operation of a transfer station at the Project Site landfill eliminates the need to develop a new landfill site with a potentially large environmental impact. Development of a new landfill site would require studies to identify potential impacts to wetlands, regulated water bodies, threatened and endangered species, critical wildlife habitats, historic sites, and community resources so that impacts could be avoided, reduced, or mitigated. Development of a new site would require at least 300 acres of land. The County has developed the existing site over several decades to serve its
customers and, while some environmental impacts are associated with an expansion, they are likely much less than what would be associated with development of a new site.
- Interim operation of the transfer station while maintaining landfill operation allows a contingency in the event of adverse weather and trucking shortages. It also buffers the County from disasters that can rapidly deplete landfill capacity.
- Mining of the existing balefill for the proposed western landfill expansion will remove waste from an unlined facility and place it within a state-of-the-art lined secure landfill with a leachate collection and removal system and landfill gas management system. This will eliminate any future potential for groundwater quality impacts associated with the waste within the balefill.
- Mining of the existing balefill will provide a source of on-site cover soils, which will reduce the need to develop additional on-site and/or off-site borrow areas and their associated environmental impacts. Reducing the need for importing cover soils from off-site sources will also reduce greenhouse gas emissions.
- The landfill provides methane gas to Cargill for use as a renewable fuel in its boilers. Expansion of the landfill will provide the County the opportunity to continue to provide beneficial gas to Cargill and explore other alternatives for processing of the landfill gas collected for beneficial use as a renewable natural gas.
- Existing landfill infrastructure (leachate storage, administrative offices, maintenance building, recycling facility, access roads, truck scales, landfill gas flare and transmission line, etc.) will continue to be used for the landfill expansion and construction of a transfer station at the Project Site. Construction of a new solid-waste disposal facility in the county would require duplication of these facilities, which would result in additional environmental impacts.
- The existing landfill is located adjacent to the Fayetteville PWC Cross Creek Water Reclamation Facility, providing simple connection for treatment of the collected landfill leachate. Siting a new disposal facility may not have similar ease of connection and would require construction of a leachate force main for discharge of leachate to municipal sewer or hauling of leachate via tanker trucks, each with associated environmental impacts.

The following are environmental benefits of the proposed construction and long-term operation of a transfer station:

- Construction and long-term operation of a transfer station at the Project Site will allow Cumberland County to remain a provider of waste disposal for county residents and businesses and the County will be responsible and accountable for contracting for the hauling and disposal of waste to a permitted disposal facility in or out of the state.
- The construction and long-term operation of a transfer station at the Project Site landfill eliminates the need to develop a new landfill site with a potentially large environmental impact. Development of a new landfill site would require studies to identify potential impacts to wetlands, regulated water bodies, threatened and endangered species, critical wildlife habitats, historic sites, and community resources so that impacts could be avoided, reduced, or mitigated. Development of a new site would require at least 300 acres of land. The County has developed the existing site over several decades to serve its customers and,
while some environmental impacts are associated with an expansion, they are likely much less than what would be associated with development of a new site.

### 11.1.2 Transportation Benefits

The following are transportation benefits of the proposed landfill expansion:

- The location of the landfill site is ideally situated off Interstate 95, Grove Street, and Ramsey Street, major roadways in the county and city of Fayetteville. Easy access from major roadways reduces travel times and traffic volumes on other roadways with less capacity.
- Haulers use an established system of roads to access the landfill and transfer station that can handle the traffic and loads. If a new landfill were constructed, it most likely would be in a rural area of the county without the same level of transportation infrastructure. This could lead to additional maintenance needs and costly upgrades to the rural roadway system. The existing landfill is located close to population centers within the county, which reduces haul times and traffic congestion.
- A new facility remote from downtown may require operation of a transfer station or longer haul by collection vehicles to transport the waste for disposal, increasing costs and requiring additional equipment and workforce to manage the same amount of waste.
- Leachate generated at the Project Site is discharged to the sanitary sewer system and treated by the Fayetteville PWC.
- Construction of a new landfill within a rural area of the county may require the leachate to be hauled by tankers to a treatment plant capable and willing to accept the leachate. This would lead to additional volume and depreciation of the rural transportation system.
- 

The following are transportation benefits of the proposed construction and long-term operation of the transfer station:

- The location of the transfer station at the Project Site is ideally situated off Interstate 95, Grove Street, and Ramsey Street, major roadways in the county and city of Fayetteville. Easy access from major roadways reduces travel times and traffic volumes on other roadways with less capacity.
- Haulers use an established system of roads to access the Project Site that can handle the traffic and loads. Siting a transfer station at an alternate location in the City or County or constructing a new landfill, it may not be in an area with the same level of transportation infrastructure. This could lead to additional maintenance needs and costly upgrades to the roadway system. The existing Project Site is located close to population centers within the county, which reduces haul times and traffic congestion.

### 11.1.3 Economic Benefits

The following are economic benefits of the proposed landfill expansion:

- CCSWD relies on an enterprise fund, which means the department receives no general tax dollars for its operations. The enterprise fund is supported by a nominal availability fee charged to each homeowner and from tipping fees for commercial wastes received at the

Project Site for disposal. Expansion of the landfill will therefore provide a continued reliable source of funding from commercial disposal for the solid-waste management program and its services in the county.

- Provision of reliable local waste disposal services encourages and supports commercial and industrial development in the city of Fayetteville and Cumberland County and residential development expansion.
- These provide jobs and opportunities to the county and its residents and contribute to the growth and wellbeing of the community.
- The proposed expansion would provide continued employment for waste management staff.
- Landfill expansion and construction of a transfer station at the Project Site would avoid the large capital costs associated with land purchase, cell construction, and infrastructure development associated with a new landfill site in the county.
- Continued use of the easily accessible landfill site close to population centers reduces haul times and distances, reducing hauling costs.
- Mining the existing balefill for the proposed western landfill expansion converts a Countyowned property from a liability to a revenue-producing asset through tipping fees from the additional waste disposal volume.
- Mining of the existing balefill will provide a source of on-site cover soils, reducing costs associated with purchasing and transporting off-site soil to the site.
- Expansion of the landfill and new transfer station will allow continued use of existing infrastructure (leachate pond, leachate treatment, administrative offices, maintenance building, recycling facility, access roads, scales, landfill gas reuse transmission systems, etc.) instead of requiring large capital expenses for facilities at a new landfill site in the county.
- Expansion of the landfill will result in a continued long-term supply of landfill methane gas for sale to Cargill for boiler fuel and a continued source of revenue for the County. Increased landfill gas generation may make other reuse options feasible.

The following are economic benefits of the proposed construction and long-term operation for a transfer station:

- CCSWD relies on an enterprise fund, which means the department receives no general tax dollars for its operations. The enterprise fund is supported by a nominal availability fee charged to each homeowner and from tipping fees for commercial wastes received at the Project Site for disposal. Operation of a transfer station will therefore provide a continued reliable source of funding from commercial disposal for the solid-waste management Landfill expansion and construction of a transfer station at the Project Site would avoid the large capital costs associated with land purchase, cell construction, and infrastructure development associated with a new landfill site in the county.
- Continued use of the easily accessible Project Site for transfer operation close to population centers reduces haul times and distances, reducing hauling costs.

# 11.2 Potential Environmental Impacts and Mitigation Strategies 

The more impactful potential environmental effects to EJ populations associated with the landfill expansion or operation of the transfer station and their mitigation strategies are summarized in Table 43, with additional information provided in Appendix D.

Table 42. Summary of Potential Impacts and Strategies

| Impact |
| :--- |
| Stormwater and groundwater quality |
| - Erosion and sedimentation due to soil disturbance |
| during construction and operation |
| - Stormwater contact with waste or leachate |
| - Damage to landfill liner or leachate lagoon containment |
| system |

| Impact | Mitigation Strategies |
| :--- | :--- |
|  | The proposed expansion is required to provide continuation <br> of services for landfill and is not expanding its services area <br> that would increase traffic to the landfill site. The site is <br> accessed by Grove Street and Ann Street and does not <br> pass by any residences. |

### 11.3 Growth-Inducing and Cumulative Impacts

Growth-inducing impacts are the ways a proposed project could foster economic or population growth, or construction of additional housing, either directly or indirectly, in the surrounding environment. Secondary effects of growth include increased demand on community services and infrastructure, increased traffic and noise, and conversion of agricultural and open space to development use. Inducement of disorderly growth that is inconsistent with local land use plans generally causes more environmental impacts.

If the proposed landfill expansion and transfer station would stimulate growth into the area, then the proposed project would have growth-inducing impacts. However, this proposed development does not provide a transportation network or utilities that would stimulate growth in the immediate area of the site so it would not have growth-inducing impacts to the area. Construction and operation of the landfill expansion would permit the County to continue to provide long-term management of the solid waste in a primarily industrial area. An expansion and transfer station empowers the County to continue to manage waste from residents and businesses. The expansion and transfer station would encourage and support commercial and industrial development in the city of Fayetteville and Cumberland County, as well as residential development expansion. Such growth opportunities provide jobs to the county and its residents and contribute to the wellbeing of the community.

Cumulative impacts can result from individually minor but collectively significant impacts, meaning that the project's incremental effects are considerable when viewed in connection with the effects of past, current, and probable future projects, as well as existing environmental factors potentially contributing to disproportionately high and adverse human-health or environmental effects. Given the highly industrialized nature of the 1-Mile Study Area and subsequent high levels of pollution already present in the area, the best mitigation practices would involve the community regarding its needs and concerns.

## 12 Summary and Conclusion

According to the EPA, EJ is the fair treatment and meaningful involvement of all people regardless of race, color, national origin, or income, with respect to the development, implementation, and enforcement of environmental laws, regulations, and policies. This report examined the demographic and environmental conditions in North Carolina, Cumberland County, and within a radius of 1 mile of the existing landfill property (1-Mile Study Area), including separate analyses of each CT identified within that radius (Demographic Study Area). County-level health data and data from the NCDEQ Community Mapping System and EPA were
also included along with listings of potential environmental impacts and benefits of landfill expansion.

The Project Site is in a heavy industrial area. It is bordered by railroad tracks, the Cape Fear River, and a wastewater treatment plant, and while the site is also neighbored by many established communities, the intent is to be a good neighbor as the long-term operations of the site are developed. During this screening, several EJ presence thresholds were exceeded and/or demographic vulnerabilities were identified that may increase the chance for disproportionately high and adverse human-health or environmental effects, as follows.

### 12.1 Race and Ethnicity

The following are identified vulnerabilities related to race and ethnicity in the 1-Mile Study Area:

- Data from the Demographic Study Area and 1-Mile Study Area show significantly larger proportions of Black residents ( 76 percent in the 1-Mile Study Area) when compared to the state and county. The share of Black residents within the 1-Mile Study Area exceeded both the state and county share by a difference greater than 10 percent.
- 50 percent or more of the 1-Mile Study Area were non-Whites.
- The share of the population reporting Two or More Races within the 1-Mile Study Area exceeded both the state and county share by a difference greater than 10 percent.
- Several EJ indicators were identified in and around the 1-Mile Study Area that lend a minority character to the Project Site vicinity.

### 12.2 Disability

The following are identified vulnerabilities related to disability in the 1-Mile Study Area:

- All six CTs within the Demographic Study Area have a 10 percent or greater difference for individuals with a disability than the percentages for the state or county. Ambulatory and cognitive difficulties comprise the largest percentages of the disabled population in the CTs.

### 12.3 Poverty and Household Income

The following are identified vulnerabilities related to poverty and household income in the 1-Mile Study Area:

- Five of the six CTs within the Demographic Study Area had Below Poverty Level population percentages that exceeded both the state and county proportions by a difference greater than 5 percent. The poverty status is high in most surrounding CT levels, with CTs displaying overall levels of 54.6 percent (CT 2), 20.1 percent (CT 8), 43.6 (CT 12), 29.2 (CT 14), and 36.8 (CT 38)
- While median incomes for CTs 8 and 26 are higher than the state and county incomes, CTs $2,12,14$, and 38 all have median incomes 10 percent or more below the state or county. A

10 percent decrease in the median income for the state is $\$ 49,141$ and for Cumberland County is $\$ 42,187$.

- Within the Demographic Study Area, CTs with high percentages of minorities also tend to be areas of low-income.

### 12.4 Limited English Proficiency

No LEP groups were identified in the 1-Mile Study Area.

### 12.5 Health

The following are identified vulnerabilities related to health in the 1-Mile Study Area:

- Out of all 100 counties in North Carolina (with 1st place indicating the healthiest), Cumberland County ranks 56th in health factors and 55th in health outcomes. Death rates for cancer, heart disease, stroke, diabetes, and cardiovascular disease were higher for Cumberland County than North Carolina as a whole.
- Based on a search of EJScreen EJ indicators, nearly the entire Demographic Study Area is likely to experience health disparities.

### 12.6 Summary

The information provided within this initial EJ Report is the first step in preparing for mitigation developed alongside affected communities. The subsequent step will be to develop a PPP in accordance with the requirements of the NCDEQ Public Participation Plan guidance document dated February 2020 and revised June 2022. The PPP will identify how input from agencies and the public will be solicited and considered. In addition, the PPP will document and plan for strategic communications and outreach initiatives to effectively reach the public and maintain engagement throughout the development of the Long-term Operations Plan for the Project Site.

Based on an initial review of the Project Area, the following recommendations should be considered to enhance public engagement activities.

- The Project Area has several places of worship and schools. These organizations can be engaged as partners during this process to provide distributed materials, locations for public meetings, and access to additional email lists to share information.
- About half of the residents in the Project Area are employed, which may impact their ability to attend in-person meetings. Additional opportunities to engage online should be made available to supplement in-person activities. Project information should be provided on social media to drive traffic to the Project's web page, announce in-person engagement, and provide general information. Online analytics can be used to understand where online traffic is originating and adjust approaches accordingly.
- Digital Accessibility is the inclusive practice of removing barriers that prevent persons with disabilities from experiencing or interacting with digital tools and technology. All materials intended to be accessed online, including, but not limited to, fact sheets,
presentations, etc., should be remediated for Americans with Disabilities Act (ADA) compliance.
- Portions of the Project Area may have pockets of low internet access which also coincide with areas of low-income EJ populations. Additional efforts should be made in these communities to reach impacted residents, including but not limited to, door-to-door canvassing, and certified mailings.

Potential Environmental Effects for Impact Management Plan- Ann Street Landfill, Cumberland County, NC

| Environmental <br> Component (Criterion) | Environmental SubComponent | Construction Phase | Operations and <br> Maintenance <br> Phase | Potential Environmental Effects | Impact Management Measures (including Mitigation Measures) | Recommended <br> Monitoring <br> Activities | Net Effects |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| NATURAL ENVIRONMENT |  |  |  |  |  |  |  |
| Surface and Ground Water | Surface Water | $\checkmark$ | $\checkmark$ | Potential for erosion and sedimentation impacts to perimeter swale, wetland and downstream (off-site) environments (Cape Fear River, Cross Creek, and Unnamed Tributary at Cross Creek) due to land clearing, grading and work within areas of exposed soils. <br> Potential for stormwater runoff from landfill contacting exposed waste and conveying contaminants to downstream water bodies. <br> Potential for landfill expansion to increase surface water runoff and increase risk of flooding of downstream properties. <br> Potential for surface water impacts if leachate storage pond overflows or leachate forcemains or gravity sewers rupture. <br> The Cape Fear River is identified by the NC Department of Environmental Quality as a Class C stream. Waters in this classification are protected for uses such as secondary recreation, fishing, wildlife, fish consumption, aquatic life | The County is required to comply with the Regulations with respect to the quality of water discharging into rivers and streams. The footprint of the disturbed areas shall be minimized to the smallest extent possible. <br> Soil Management Plan and Erosion and Sediment Control Plans are in place for the existing landfill area. The plans will be updated to protect surface waters during construction and operations in new areas of the landfill. <br> All disturbed areas of the construction site will be stabilized and revegetated as soon as conditions allow. <br> Landfill expansion plans will include designs for the effective management of stormwater to avoid adverse impact to stormwater quality and to detain runoff to avoid downstream flooding | A qualified Solid Waste Management Inspector from the NC Division of Waste <br> Management- Solid Waste Section will regularly monitor construction activities and operations and confirm the requirements are followed in the construction plans and landfill Operations Plan. <br> Existing NPDES permit will be modified as needed to reflect additional or revised monitoring/sampling locations for landfill expansion areas. <br> Landfill expansion contractors will be required to monitor temporary erosion and sedimentation controls after every significant rainfall and make any necessary repairs. <br> Landfill personnel will regularly monitor operations | No net effects anticipated. |

|  |  |  |  | including propagation, survival and maintenance of biological integrity, and agriculture. Secondary recreation includes wading, boating, and other uses involving human body contact with water where such activities take place in an infrequent, unorganized, or incidental manner. <br> Cross Creek is also identified as Class C waters. | due to landfill development. <br> Landfill expansion leachate forcemains will be dual contained to allow monitoring and containment of potential leaks. | to limit stormwater contact with exposed waste and contain stormwater in contact with waste in accordance with Operations Plan and landfill permit. <br> Landfill personnel will regularly monitor performance of leachate storage pond, forcemains, and gravity sewers for proper operation and promptly make any required repairs. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Groundwater | $\checkmark$ | $\checkmark$ | Potential for groundwater impacts as a result of spills or equipment leaks during construction of new landfill cell areas. <br> Potential for groundwater impacts if the liner system at the base of the landfill and/or leachate storage pond is installed incorrectly or is damaged. <br> Potential for groundwater impacts if leachate force mains or gravity sewers servicing the landfill are damaged or rupture. <br> If the Southern expansion option is selected the stormwater pond and infrastructure will need to be relocated. | Refueling and maintenance of construction equipment should occur within designated areas only. Any hazardous materials used for construction will be handled in accordance to appropriate regulations. <br> A Construction Emergency Response and Communications Plan shall be developed and followed throughout the construction phase including spill response plans. <br> Personnel shall be trained in how to apply the plans. <br> Spills into water courses shall be immediately be | A qualified Environmental Inspector shall regularly monitor construction activities to confirm the requirements outlined in the (list Plans) are followed. Workers shall report any instances of spills to their supervisors. <br> The updated Groundwater Monitoring Plan for the landfill will consist of a system of monitoring wells and regular groundwater sampling that will be able to detect the release of leachate from the landfill and into the groundwater before | No net effects anticipated. |

|  |  |  |  |  | contained and cleaned <br> up in accordance with state and local regulatory requirements and reported to the NC Department of Environmental Quality. <br> The existing Groundwater Monitoring Plan for the landfill will be revised to adequately monitor groundwater within expansion areas and will include the installation of additional monitoring wells. <br> Landfill expansions will include a composite bottom liner system that consists of a $60-\mathrm{mil}$ HDPE plastic liner above a compacted clay liner to contain landfill leachate. Gravel drains and perforated pipes constructed over the bottom liner will be used to collect leachate and direct it to sumps where the leachate will be pumped out of the landfill to a leachate storage pond. From the pond, the leachate will be released to the sanitary sewer system and ultimately treated at a City of Fayetteville PWC treatment plant. <br> A rigorous Construction Quality <br> Assurance/Construction Quality Control (CQA/CQC) Plan will be developed prior to landfill expansion | contaminated groundwater leaves the property boundary. This will allow groundwater remediation to be implemented, such as pumping of the groundwater for treatment, in order to protect downstream properties from groundwater contamination. <br> The CQA/CQC Plan will include testing and inspection requirements during landfill construction to verify materials are installed correctly and function as intended to safeguard the environment. <br> Landfill personnel will regularly monitor performance of leachate storage pond, forcemains, and gravity sewers for proper operation and promptly make any required repairs. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  |  |  | construction to confirm the correct materials are used for landfill liner and leachate collection system construction, to confirm materials are installed properly, and to test for potential leaks. <br> Landfill expansion leachate forcemains will be dual contained to allow monitoring and containment of potential leaks. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Air Quality | Dust | $\checkmark$ | $\checkmark$ | Potential for dust emission due to vehicular travel on unpaved roads, construction of new landfill cell areas, construction of transfer station and landfill operations. | During construction, the following dust mitigation measures shall be used: <br> - The roadway will be sprayed with water as required to minimize dust generation <br> - The construction contractor will be required to develop a Construction Management Plan (CMP) that specifically addresses dust controls and mitigation measures. <br> During operations, the following dust mitigations measures shall be used: <br> - Roadways and areas with recently placed daily and intermediate soil cover will be sprayed with water to minimize dust generation. | The construction contractor shall visually inspect the road and implement dust mitigation measures where required. <br> A qualified Environmental Inspector shall regularly monitor construction activities to confirm the requirements outlined in the CMP are being followed. <br> Landfill personnel will regularly inspect operations to determine if excessive dust is being generated and to implement mitigation measures. | No net effects anticipated. |

|  |  |  |  |  | - Alternate permitted daily cover such as Posi-Shell, tarps, and mulch may be used as daily cover instead of soil. <br> - Vegetation will be established as soon as practical on exposed soil surfaces. <br> - Operations may be curtailed during high wind conditions. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Landfill Gas |  | $\checkmark$ | Landfill gas (a combination of methane and other gasses) is generated as a byproduct of the digestion of organic materials by organisms. Landfill gas, if inadequately controlled, can present an explosion hazard, cause health impacts from breathing in noxious gasses, potential suffocation hazard in confined spaces, and odor issues. <br> Excessive intrusion of oxygen into the landfill can create conditions that lead to spontaneous combustion of the waste resulting in excess heat within the landfill and combustion byproducts being released into the atmosphere. | The existing landfill has a system of landfill gas wells installed within the waste to collect the gas before it is released into the environment. The collected gas is transmitted through pipes to a local business where it is reused as boiler fuel. This landfill gas collection system will be expanded into the landfill expansion areas. The County will explore other gas reuse options based on gas supply and economics. <br> The landfill also has a flare to burn the gas if the boiler is shut down for maintenance or if excess gas is generated. <br> The landfill gas emissions are regulated by an air permit that limits the amount of landfill gas | The County is required to conduct regular landfill gas monitoring as a condition of the air permit within the landfill and at the flare station. The monitoring is used to determine whether the gas collection system is performing properly. Excessive emissions may require adjustments to the gas collection system such as installing more gas wells, adjusting vacuum on the wells, adjustments or repairs to the flare station, or the installation of additional cover soils. <br> The existing landfill has a system of landfill gas detection wells installed along the | The County receives between \$250,000 and \$500,000 annually for the landfill gas rights. Landfill expansion will result in the generation of additional marketable gas that may make other reuse options more attractive and increase revenue to the County. |

|  |  |  |  |  |  | meets these requirements. Gas quality can be controlled by adjusting vacuum on gas wells, installing additional cover soils, and removing unproductive wells from the system. <br> Prior to entering confined spaces where landfill gas can collect, such as manholes and valve boxes, personnel are required to obtain a confined space entry permit which requires air monitoring to determine if the atmosphere is safe to breath. Unsafe conditions will require venting until safe levels are reached or the use of respirators or self-contained breathing apparatus. <br> Odors are monitored by landfill staff on a regular basis. <br> Excessive oxygen intrusion can be detected my measuring oxygen levels and gas temperature at landfill gas wellheads. Oxygen levels and temperatures at the wellheads are |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  |  |  |  | routinely obtained as part of operations to verify the landfill gas extraction system is operating properly and to confirm end use gas quality. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Noise and Aesthetics | Noise | $\checkmark$ |  | Potential for noise through the use of large equipment for construction of the expansion area. | Construction equipment shall be well maintained and will be required to have mufflers. <br> Construction hours will be limited to avoid adverse effects on neighbors. <br> The construction contractor will be required to develop a Construction Management Plan (CMP) that specifically addresses noise controls, mitigation to be implemented and frequency of equipment inspection. | A qualified Environmental Inspector shall regularly monitor construction activities to confirm the requirements outlined in the CMP are being followed. <br> Landfill personnel will regularly monitor the landfill for excessive noise levels during construction and notify contractor if excessive noise levels are encountered. | No net effects anticipated. |
|  | Noise |  | $\checkmark$ | Potential for noise through the use of large equipment during site and transfer station operations. | Operating equipment is the primary source of noise on the site. The number of hours that the equipment is limited through efficient fill operations. <br> In order to further reduce negative effects associated with noise, the County has incorporated operational practices | The County shall attempt to investigate and report upon all complaints as soon as possible. They are committed to responding to complaints within five (5) business days regarding their findings and proposed mitigation measures. | No net effects anticipated. |

|  |  |  |  |  | that minimize off-site noise effects, including: <br> - All motorized equipment is kept in good repair with standard operational exhaust mufflers. <br> - Landfill and transfer station operations occur weekdays between 6:30 AM and 4 PM. Saturday hours are between 8 AM and 12 noon. <br> Noise barriers, such as earthen berms or walls, can be installed if objectional off-site noise levels are persistent. | Landfill personnel will regularly monitor the landfill for excessive noise levels during operations and make necessary adjustments to bring noise to acceptable levels. |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Aesthetics | $\checkmark$ | $\checkmark$ | A small number of houses with a view of the landfill (Eufaula Street, Marsh Street and McArthur Street) may experience negative visual impacts from the potential balefill mining operation and Western landfill expansion. <br> The transfer station location would be in existing building on-site or location that is not visible to the public. <br> No significant residential visual impacts are anticipated for the potential Southern expansion. | The County has developed a Public Participation Plan (PPP). Using the PPP, the County will identify stakeholders and develop outreach materials to communicate and engage the public on landfill expansion. The County will maintain engagement with the community throughout the permitting, construction and operation of the landfill expansion and ongoing landfill management activities. <br> The County will perform a view scape analysis as part of the PPP to further define visual impacts from the various landfill expansion alternatives | Landfill personnel will regularly travel nearby residential streets during landfill expansion construction and operations to identify adverse visual impacts and develop remedial measures as needed. | A relatively minor adverse visual impact is anticipated if the potential balefill mining operation and Western landfill expansion proceeds. |

|  |  |  |  |  | and to identify effective mitigation strategies. <br> Visual impacts will be mitigated through maintenance of existing vegetative buffers, additional plantings, and potentially vegetated screening berms if required. Initial filling of the landfill may also be concentrated on the outside slope in order to provide a visual screen for interior operations. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Vegetation |  | $\checkmark$ |  | The NC Forest Service prioritized the conservation of working forest lands. These lands are located along the Western bank of the Cape Fear River to the NC Clean Water Management Trust Fund easements north of I-95. | The County will minimize the removal of trees as much as possible during construction of the landfill expansion. | The County will coordinate with the NC Forest Service prior to construction activities and develop a process to preserve the working forest lands and vegetative barrier to the Cape Fear River. | Minor impacts may occur to vegetation during construction activities. The County will work with the NC Forest Service to minimize any effects from construction. |
| Wetland/ <br> Floodplain/Jurisdictional Streams Impact |  | $\checkmark$ | $\checkmark$ | NC Department of Environmental Quality does not identify wetlands between the CSX tracks the Cape Fear River, I-95 ( N Eastern Boulevard), and Grove Street (NC 201). Impacts are not expected. | The County is required to comply with the NPDES permit with respect to the quality of water discharging into rivers and streams. The permit requires regular stormwater sampling and analysis to verify stormwater discharge contaminant limits are met. The NPDES permit will be updated to include the expansion areas. <br> Soil Management Plan and Erosion and Sediment Control Plans | A qualified Solid Waste Management Inspector from the NC Division of Waste Management- Solid Waste Section will regularly monitor construction activities and confirm the requirements are followed in the construction plans. <br> Contractors will be required to keep their construction activities outside of | The wetlands and tributary preliminarily identified would be impacted by |

|  |  |  |  |  | are in place for the existing landfill area. The plans will be updated to protect surface waters during construction and operations in new areas of the landfill. <br> All disturbed areas of the construction site will be stabilized and revegetated as soon as conditions allow. <br> A formal wetland delineation will be required as part of the landfill expansion permitting process. The results of the survey will be reviewed by the U.S. Army Corps of Engineers who will also issue any wetlands disturbance permits that may be required. The permits typically require mitigation of disturbed wetlands which can be accomplished through protection and enhancement of remaining wetlands onsite or through payment to a wetlands mitigation bank where high quality wetlands are created, usually within the same river basin, to compensate for the ecological effects of the wetland disturbance. <br> Remaining wetlands on-site will be protected by maintaining an undisturbed buffer | wetlands, <br> floodplains, and jurisdictional streams that are not permitted for impacts. <br> Wetland and stream disturbance permits are subject to inspections by state and federal personnel to verify that the conditions of the permits are being met. <br> Violations of the permits are subject to penalties. <br> Landfill personnel will regularly inspect the site during construction and operations to verify that on-site wetlands floodplains, and streams not permitted for disturbance are protected. | landfill <br> construction and would likely require mitigation, potentially through payments to a wetland mitigation bank. These wetlands and tributary, which are located within a former waste disposal area, are probably low-quality and therefore obtaining disturbance permits should not be difficult. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  |  |  | between the wetlands and land disturbance. <br> Impacts within the Cape Fear River floodplain will be avoided to the extent possible during the landfill expansion permitting process to the extent possible. If necessary, a floodplain study can be conducted to more accurately define the floodplain in the area. The North Carolina solid waste regulations require a demonstration that any landfill construction activities within a floodplain do not result in increased flooding potential. <br> On-site wetlands, floodplains, and jurisdictional streams |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

|  |  |  |  |  | construction and operation of the landfill expansion and ongoing landfill management activities. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Threatened and Endangered Species |  | $\checkmark$ | $\checkmark$ | As of July 17, 2020, the US Fish and Wildlife Service lists 8 threatened or endangered species for Cumberland County. A survey of the study area is recommended to determine if any of these listed species will be impacted during construction activities. | If threatened or endangered species are identified within the study area and cannot be avoided or reduced, mitigation mechanisms could include: <br> - Construction activities taking place outside of nesting or migratory seasons <br> - Restricting work activities within a buffer zone <br> - Transplanting species outside the impact area <br> - Notification to the appropriate federal or state agency | A Biologist may be required on-site as needed should a species that is protected under the Endangered Species Act (ESA) be identified within or adjacent to the construction site. The Biologist may be required to confirm the presence or absence and identification of a particular species prior to contacting the Project Manager or County representative. | Unknown |
| Underground Storage Tank (UST) |  | $\checkmark$ | $\checkmark$ | Four active USTs between Lamon Street and NC 210 were identified by the NC Department of Environmental Quality. No active UST's were identified in the working disposal area or proposed area for expansion. <br> Within the area between the CSX tracks, NC 201, I95, and the Cape Fear River there have been 20 reported UST incidents between 1990 and April 21, 2021. Files on all | A Construction Emergency Response and Communications Plan shall be developed and followed throughout the construction phase including response plans for USTs. <br> If contaminated soils are encountered during construction, assessment and removal will be | Workers shall report any instances of UST discovery to their supervisors. | No net effects anticipated. |

| \| |  |  |  | except two incidents are closed and are identified as Low Risk. <br> Incident No. 17465 (698 Ann St.) is identified as an Intermediate Risk. A Limited Site Assessment was completed in 2021 for the site. No Further Action was recommended. The incident/ location is not expected to result in impacts. <br> Incident No. 47302 (503 Grove St.) is identified as an Unknown Risk. This incident occurred July 1, 2020. The incident may be identified as Unknown since the database search indicates that the incident does not appear to be inspected. This may be due to travel restrictions as a result of Covid-19. The site is not located in proximity to the landfill working area or areas under consideration for expansion. The incident/ location is not expected to result in impacts. | undertaken upon discovery. |  |

| HUMAN ENVIRONMENT |  |  |  |  |  |  |  |
| Cultural Resources | Historic Properties | $\checkmark$ |  | Four properties listed in the National Register of Historic Places are located west of Ramsey Street (Site ID CD0162, CD0006, CD0169, and CD0017). No direct or indirect impacts are expected to occur to these resources. <br> Brookside Cemetery (CD1030) is located in a Local Historic District. | No direct or indirect impacts are expected to occur to the 4 National Register resources. <br> Impacts to Brookside Cemetery from construction traffic are expected to be minor and temporary. | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns about Brookside Cemetery. | Minor temporary impacts are expected for access and noise levels in Brookside Cemetery. |
|  | Cemeteries | $\checkmark$ |  | Ann Street, Lamon Street and Gale Street provide access to Cross Creek Cemetery and the adjacent Brookside Cemetery. <br> Impacts to the cemeteries are expected to be low. Minor delays in accessing the cemeteries and noise impacts may | Impacts from construction traffic are expected to be minor and temporary and not permanently impact the use of the cemeteries. | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns. | Minor temporary impacts are expected for access and noise levels in the cemeteries. |

|  |  |  | inconvenience individuals using the cemeteries. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Archaeological Resources | $\checkmark$ | An archaeological survey is recommended of all level, well-drained, undeveloped landforms within the study area for the landfill expansion areas. | Unknown | Unknown | Unknown |
|  | Native <br> American <br> Sites | $\checkmark$ | The area is identified as being in a location that may have been inhabited by the Catawba people. <br> An archaeological survey is recommended of all level, well-drained, undeveloped landforms within the study area for the landfill expansion areas. <br> Impacts to Native American sites are currently unknown. | During the planning stage for the landfill expansion, the Catawba Nation will be provided a letter with project information and requesting comments on the proposed expansion. | Any resources found during construction activities will be preserved and the State Historic Preservation Office will be contacted for consultation. | Unknown |
| Community Resources | Parks and Schools | $\checkmark$ | Teresa Berrien Elementary School, Lamond Street Park, and Riverside Dog Park are located within a 0.50 mile buffer of the landfill property. <br> The elementary school is not expected to be directly impacted. Indirect impacts could include noise during the daytime due to construction traffic. Park users may experience minor impacts from truck traffic on Lamon or Ann Streets. Day care facilities were not identified within 0.05 miles of the landfill property. | The County has developed a Public Participation Plan (PPP). Using the PPP, the County will identify stakeholders and develop outreach materials to communicate and engage the public on landfill expansion. The County will maintain engagement with the community throughout the permitting, construction and operation of the landfill expansion and on- | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns. | Minor temporary impacts are expected for park access. Minor, temporary increases in noise are expected at the parks and elementary school during construction activities. |

|  |  |  |  |  | going landfill management activities. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Places of Worship | $\checkmark$ |  | Nine places of worship are located within a 0.50 mile buffer of the landfill property. <br> Landfill activities are not likely to impact the places of worship. The landfill is not open during the evening or Sunday's when worship services are expected to be held. Access to places of worship and landfill gates are from different roadways. | The County has developed a Public Participation Plan (PPP). Using the PPP, the County will identify stakeholders and develop outreach materials to communicate and engage the public on landfill expansion. The County will maintain engagement with the community throughout the permitting, construction and operation of the landfill expansion and ongoing landfill management activities. | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns. | No net effects anticipated. |
| Recreational Resources | Paddle Trail | $\checkmark$ | $\checkmark$ | The Cape Fear River is identified as a NC Paddle Trail. No impacts are expected to the paddle trail or access point located south of the landfill on Person Street. | N/A | N/A | N/A |
| Socio-Economic Effects |  | $\checkmark$ | $\checkmark$ | The landfill provides an important service to the local industries and business community. Economically, the landfill helps support the businesses in the community. <br> Minority and low-income populations, collectively referred to as Environmental Justice (EJ) populations are located west of the landfill primarily along Eufaula, Marsh, Irene, and Vogel Streets. | The County has developed a Public Participation Plan (PPP). Using the PPP, the County will identify stakeholders and develop outreach materials to communicate and engage the public on landfill expansion. The County will maintain engagement with the community throughout the permitting, construction and operation of the landfill | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns. <br> Regular inspection of the vegetative/ tree screen during and after construction will be completed. | No net effects anticipated. |

|  |  |  |  | Houses on these streets may have a limited view of the west side of the landfill. Under a Western Expansion option of the landfill there is a potential for visual or viewscape impacts at houses along these streets that face the direction of the landfill. | expansion and ongoing landfill management activities. <br> Expansion of the landfill will include a vegetative/ tree buffer creating a visual barrier to block the landform developed. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Other | Utilities | $\checkmark$ | $\checkmark$ | The Cross Creek Water Reclamation Facility is located south of the landfill disposal area. <br> CSX Transportation has a railyard located north of the landfill disposal area. Milan Road separates the railyard and current landfill activities. <br> The Southern expansion area would remain within the existing parcel and be approximately 900 feet from the water reclamation facility. The Western expansion options would primarily be located south of Milan Road. <br> Visual or viewshed impacts, noise, and dust may occur at either of these facilities, depending on the expansion option. The impacts are expected to be minimal. Noise impacts may not be notable as both these utilities are expected to have moderate to high existing noise levels. <br> Fayetteville Public Utilities currently provides water and sanitary sewer service to the existing landfill. | The County has developed a Public Participation Plan (PPP). Using the PPP, the County will identify stakeholders and develop outreach materials to communicate and engage the public on landfill expansion. The County will maintain engagement with the community throughout the permitting, construction and operation of the landfill expansion and ongoing landfill management activities. <br> Expansion of the landfill will include a vegetative/ tree buffer creating a visual barrier to block the landform developed. <br> The County will minimize the removal of trees as much as possible during construction of the landfill expansion. <br> Access roadways should be sprayed with water as required to | The County will conduct a robust public involvement process to understand and work to address neighborhood concerns. <br> Landfill personnel monitor leachate generation rates and release rates to the sanitary sewer system to prevent overloading of the sewer system. <br> Landfill staff will monitor power consumption and leachate pump operation to identify pumps and/or controls that need to be repaired or replaced. | Increased leachate generation rates are anticipated resulting in increased leachate discharge to the sanitary sewer system. <br> Relatively minor increase in electric power consumption is anticipated. |

|  |  |  |  | Landfill expansion is not expected to significantly increase water demand. Increases in leachate generation, which is released to the sanitary sewer system, is anticipated as the lined waste disposal area of the landfill increases. <br> Electric power service to the landfill is provided by Duke Energy. Relatively minor increases in power consumption are anticipated with landfill expansion, primarily due to the installation of additional leachate pumps. Otherwise, the landfill expansion will be using existing electrical infrastructure. | minimize dust <br> generation. <br> The lined leachate pond provides a means of regulating the quantity of leachate that is released to the sanitary sewer system. The pond provides temporary storage during high generation rates such that discharge does not overload the sanitary sewer system. <br> Leachate generation rates can be minimized by applying daily, intermediate, and final cover as soon as possible and by providing stormwater controls that direct runoff away from the working face of the landfill. <br> Additional leachate pumps required for landfill expansion will be sized for efficient operation. They will be controlled by float switches and therefore will only operate when necessary, minimizing additional power consumption. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Traffic | $\checkmark$ | $\checkmark$ | A temporary increase in construction traffic is anticipated during landfill or transfer station construction, primarily along Anne Street and Grove Street. <br> Traffic accessing the landfill during normal | Waste delivery schedules can be adjusted to relieve traffic congestion problems if needed. | Landfill or transfer station personnel will monitor traffic entering the landfill for excessive queues entering the landfill. <br> The City of Fayetteville | Gradual increase in landfill traffic is anticipated. <br> Tranfer trailer deliver compacted loads of waste at |

|  |  |  |  | operations is expected to |  | routinely monitors | approximately 20 tons per trip. The project site currently receives less than 1000 tons per day, so approximately 40 to 50 transfer trailers a day would be anticipated for long-term transfer operations. |
